Subject: Protecting Our Private Data - DLP

The Auditors that reviewed our Asset Inventory had a data breach. Any sensitive information (user accounts/passwords) may have been leaked.

Change any accounts that may have been included.

The Board of Directors have now required that we monitor any Private or Confidential data to ensure these files are not leaked AND to detect if they are.

Define a data loss protection policy with the Palo Alto firewall that blocks any outbound .docx files being emailed (SMTP).

Please respond in a management memo with how you are going to implement these requirements and include screen shots showing the data filtering configuration and application to the appropriate policy.

Thank you.

Executive Management
