To: To Infrastructure Team

Subject: 003 APT Concerns

The CIO attending a briefing that covered details of Advanced Persistent Threats. The key take-away for her was that all organizations have been infected, the only difference is that some know they have been compromised, and others do not. The consensus is that there is a high likelihood that our network has compromises. This underscores the importance of hardening our internal systems.

The advice from the briefing was to protect the key assets of the organization. Please prepare a memo that can be used to assuage the CIO and her concerns about the security of the INTERNAL network. What steps have we done to protect the data on our servers from unauthorized access. Our organization does maintain critical data, confidential data, and we need to insure that we do not have an unauthorized disclosure.

Thank you.

IT Director
