Subject: 001 Web Site Integrity

The CIO is concerned about the integrity of our Web sites (of which we have a few web-based services). Develop a script that uses a hash validation of the web pages to detect if any of them are modified or otherwise defaced by a compromise.

Respond with a memo that documents each web-service and the script that was deployed on each to do this check. The web pages should be checked every 5 minutes.

Thank you.

IT Director
