Subject: URL Blocking Exceptions

Now that we've implemented URL blocking the marketing department is now saying that they cannot effectively communicate with customers via social media. The CFO has now decided that we should now permit access to some social media sites but only for users within the marketing department.

Create a new custom URL category and tie it to a new firewall policy that matches users in the marketing department giving them access to some social media sites listed below.

linkedin.com
twitter.com
facebook.com

I need to report to the CFO that the exceptions are in place and working. Send me documentation detailing how you implemented the policy on the firewall and provide examples of the firewall permitting access to only users in the marketing group but still denying access to everyone else.

Thank you.
