Subject: Our DNS is leaking!

I just received an anonymous email listing all of our internal IP addresses. Apparently our current DNS configuration is leaking our internal addresses to the public Internet! Find out why and fix it! Just make sure we are still serving up DNS for our public servers after you are done. Send me a screenshot of nslookup using our external DNS server to resolve out to our public servers, but failing to resolve our internal servers, as well as a description of what was technically done to achieve this. You must explicitly show that the external DNS is not resolving internal lookups.

Thank you.
