Subject: 001 Configure NTP

Team, we really need to have a consistent time on our network if we want our log files to be of any use. We cannot have servers showing whatever time that they feel like.

Inject Instructions:

1) You are to set up one main clock on the network that every machine will be reconfigured to get the time from.
2) Please configure all devices, servers and workstations to get their time from this clock.

The deliverable for this inject is: a memo that documents what device is the master clock source. Then for each device: a description of how you configured NTP on it, and a screen shot showing
the time as synchronized.

Thank you.

Director - Systems Engineering
